## Jobsheet 4 PWL

### Praktikum 1

1.

```
<?php

namespace App\Models;

use Illuminate\Database\Eloquent\Factories\HasFactory;
use Illuminate\Database\Eloquent\Model;

class UserModel extends Model
{
    use HasFactory;

    protected $table = 'm_user'; //menedefinisikan nama tabel yang digun
    protected $primaryKey = 'user_id'; //menedefinisikan primary key dan
    protected $fillable = ['level_id', 'username', 'nama', 'password'];
}
```

2.

```
<?php

namespace App\Http\Controllers;

use App\Models\UserModel;
use Illuminate\Http\Request;
use Illuminate\Support\Facades\Hash;

class UserController extends Controller
{
    public function index(){
        // tambah data user dengan eloquent mo
        $data = [
            'level_id' => 2,
            'username' => 'manager_dua',
            'nama' => 'Manager 2',
            'password' => Hash::make('12345')
        ];
        UserModel::create($data);

        //coba akses model userModel
        $user = UserModel::all(); // ambil semua
        return view('user', ['data'=> $user]);
    }
}
```

3. Muncul baris baru

## Data User

ID	Username	ID Level Pengguna	
1	admin	Administrator	1
2	manager	Manager	2
3	staff	Staff/Kasir	3
6	customer-1	Pelanggan Pertama	3
16	manager_dua	Manager 2	2

4.

```
protected $fillable = ['level_id', 'username', 'nama'];
```

5.

```
public function index(){  
    // tambah data user dengan eloquent m  
    $data = [  
        'level_id' => 2,  
        'username' => 'manager_tiga',  
        'nama' => 'Manager 3',  
        'password' => Hash::make('12345')  
    ];  
    UserModel::create($data);  
}
```

6. Terjadi error karena password tidak memiliki nilai default

SQLSTATE[HY000]: General error: 1364 Field 'password' doesn't have a default value

## Praktikum 2.1

1.

```
class UserController extends Controller  
{  
    public function index(){  
        $user = UserModel::find(1);  
        return view('user', ['data'=> $user]);  
    }  
}
```

2.

```
<!DOCTYPE html>
<html>
  <head>
    <title>Data User</title>
  </head>
  <body>
    <h1>Data User</h1>
    <table border="1" cellpadding="2" cellspacing="0">
      <tr>
        <th>ID</th>
        <th>Username</th>
        <th>ID Level Pengguna</th>
      </tr>
      <tr>
        <th>{{ $data-> user_id }}</th>
        <th>{{ $data-> username }}</th>
        <th>{{ $data-> nama }}</th>
        <th>{{ $data-> level_id }}</th>
      </tr>
    </table>
  </body>
</html>
```

3. Akan menampilkan baris pertama saja

## Data User

ID	Username	ID Level Pengguna	
1	admin	Administrator	1

4.

```
class UserController extends Controller
{
    public function index(){
        $user = UserModel::where('level_id', 1)->first();
        return view('user', ['data'=> $user]);
    }
}
```

5. Akan menampilkan model pertama yang cocok dengan batasan kueri

## Data User

ID	Username	ID Level Pengguna	
1	admin	Administrator	1

6.

```
class UserController extends Controller
{
    public function index(){
        $user = UserModel::firstWhere('level_id', 1);
        return view('user', ['data'=> $user]);
    }
}
```

7. Akan menampilkan model pertama yang cocok dengan batasan kueri

## Data User

ID	Username	ID Level Pengguna	
1	admin	Administrator	1

8.

```
class UserController extends Controller
{
    public function index(){
        $user = UserModel::findOr(1, ['username', 'nama'], function() {
            abort(404);
        });
        return view('user', ['data'=> $user]);
    }
}
```

9. findOr akan mencari model pertama dan menampilkan kolom username dan nama

## Data User

ID	Username	ID Level Pengguna	
	admin	Administrator	

10.

```
class UserController extends Controller
{
    public function index(){
        $user = UserModel::findOr(20, ['username', 'nama'], function() {
            abort(404);
        });
        return view('user', ['data'=> $user]);
    }
}
```

11. Akan menampilkan 404|NOT FOUND karena tidak menemukan model 20 dan adanya kode abort (404)

404 | NOT FOUND

## Praktikum 2.2

1.

```
class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::findOrFail(1);
        return view('user', ['data'=> $user]);
    }
}
```

2. Method findOrFail akan menampilkan model 1

### Data User

ID	Username	ID Level Pengguna	
1	admin	Administrator	1

3.

```
class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::where('username', 'manager9')->firstOrFail();
        return view('user', ['data'=> $user]);
    }
}
```

4. Akan menampilkan 404 | NOT FOUND karena method findOrFail tidak menemukan model dengan “manager9”

404 | NOT FOUND

## Praktikum 2.3

1.

```
class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::where('level_id', 2)->count();
        dd($user);
        return view('user', ['data'=> $user]);
    }
}
```

2. Method count () akan mengembalikan nilai 2, yaitu jumlah elemen yang diberikan dari string yang diberikan

```
2 // app\Http\Controllers\UserController.php:14
```

3.

```
<?php
namespace App\Http\Controllers;
use App\Models\UserModel;
use Illuminate\Http\Request;

class UserController extends Controller
{
    public function index()
    {
        // Hitung jumlah pengguna dengan level_id = 2
        $jumlah_pengguna = UserModel::where('level_id', 2)->count();

        // Kirim data ke view
        return view('user', compact('jumlah_pengguna'));
    }
}
```

```
<!DOCTYPE html>
<html lang="id">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Data User</title>
</head>
<body>
    <h1>Data User</h1>
    <table border="1" cellpadding="5" cellspacing="0">
        <tr>
            <th>Jumlah Pengguna</th>
        </tr>
        <tr>
            <td>{{ $jumlah_pengguna }}</td>
        </tr>
    </table>
</body>
</html>
```

## Data User

Jumlah Pengguna
2

## Praktikum 2.4

1.

```
<?php

namespace App\Http\Controllers;

use App\Models\UserModel;
use Illuminate\Http\Request;

class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::firstOrCreate(
            [
                'username' => 'manager',
                'nama' => 'Manager',
            ],
        );

        return view('user', ['data' => $user]);
    }
}
```

2.

```
<!DOCTYPE html>
<html>
    <head>
        <title>Data User</title>
    </head>
    <body>
        <h1>Data User</h1>
        <table border="1" cellpadding="2" cellspacing="0">
            <tr>
                <th>ID</th>
                <th>Username</th>
                <th>ID Level Pengguna</th>
            </tr>
            <tr>
                <td>{{ $data-> user_id }}</td>
                <td>{{ $data-> username }}</td>
                <td>{{ $data-> nama }}</td>
                <td>{{ $data-> level_id }}</td>
            </tr>
        </table>
    </body>
</html>
```

3. Method firstOrCreate akan menampilkan data yang memiliki nilai username = manager dan name = Manager. Jika tidak menemukan data, method akan menginsert nilai ke table database

## Data User

ID	Username	ID Level Pengguna	
2	manager	Manager	2

4.

```
<?php

namespace App\Http\Controllers;

use App\Models\UserModel;
use Illuminate\Support\Facades\Hash;
use Illuminate\Http\Request;

class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::firstOrCreate(
            [
                'username' => 'manager22',
                'nama' => 'manager dua dua',
                'password' => Hash::make('12345'),
                'level_id' => 2,
            ],
        );

        return view('user', ['data' => $user]);
    }
}
```

5. Karena method firstOrCreate tidak menemukan data yang memiliki nilai username = manager22 dan name = manager dua dua. Method akan menginsert nilai ke table database

## Data User

ID	Username	ID Level Pengguna	
18	manager22	manager dua dua	2

<input type="checkbox"/>	<a href="#">Ubah</a>	<a href="#">Salin</a>	<a href="#">Hapus</a>	18	2	manager22	manager dua dua	\$2y\$12\$L91ejYrRFknKcblQYiXNyeF8h4KS.YAz4DJqt9iX6jT...	2025-03-08 03:40:09	2025-03-08 03:40:09
--------------------------	----------------------	-----------------------	-----------------------	----	---	-----------	-----------------	--	---------------------	---------------------

6.

```
class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::firstOrNew(
            [
                'username' => 'manager',
                'nama' => 'Manager',
            ],
        );

        return view('user', ['data' => $user]);
    }
}
```

7. Method firstOrNew akan menampilkan data yang memiliki nilai username = manager dan name = Manager.

## Data User

ID	Username	ID Level Pengguna	
2	manager	Manager	2

8.

```
class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::firstOrNew(
            [
                'username' => 'manager33',
                'nama' => 'manager Tiga Tiga',
                'password' => Hash::make('12345'),
                'level_id' => 2,
            ],
        );

        return view('user', ['data' => $user]);
    }
}
```

9. Karena method firstOrNew tidak menemukan data yang memiliki nilai username = manager33 dan name = manager Tiga Tiga. Method akan menyiapkan menginsert nilai ke table database

## Data User

ID	Username	ID Level Pengguna	
	manager33	manager Tiga Tiga	2

<input type="checkbox"/>	 Ubah	 Salin	 Hapus	1	1	admin	Administrator	\$2y\$12\$.tYF5/G3RyO5s1WOZeUSuODA.UYT.XeRuRkch1L8sj4...	NULL	NULL
<input type="checkbox"/>	 Ubah	 Salin	 Hapus	2	2	manager	Manager	\$2y\$12\$.s8jTR.0CFJSq/Doz5KCQHOq\$5wYYQqSu1uRdaa6AzEq...	NULL	NULL
<input type="checkbox"/>	 Ubah	 Salin	 Hapus	3	3	staff	Staff/Kasir	\$2y\$12\$.SuXRgXaRSzcNW63khnPqH.uAvuF70E9eQ28Z7pL2TLA...	NULL	NULL
<input type="checkbox"/>	 Ubah	 Salin	 Hapus	6	3	customer-1	Pelanggan Pertama	\$2y\$12\$.Mnf.neNyLWT005RyjZB/auWfuoYCYd0QtWIBgMXNE7R...	NULL	2025-03-05 09:31:21
<input type="checkbox"/>	 Ubah	 Salin	 Hapus	16	2	manager_dua	Manager 2	\$2y\$12\$.cZb/A8UAec2eD9jgz.zw9u/GyWZzkD2ZpHWDDKPaP/...	2025-03-07 04:39:09	2025-03-07 04:39:09
<input type="checkbox"/>	 Ubah	 Salin	 Hapus	18	2	manager22	manager dua dua	\$2y\$12\$.L91ejYrRFknKcblQYixNyeF8h4KS.YAz4DJqt9iX6jT...	2025-03-08 03:40:09	2025-03-08 03:40:09

10.

```
class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::firstOrCreate(
            [
                'username' => 'manager33',
                'nama' => 'manager Tiga Tiga',
                'password' => Hash::make('12345'),
                'level_id' => 2,
            ],
        );
        $user->save();
        return view('user', ['data' => $user]);
    }
}
```

11. Method save() akan menyimpan data yang berada di dalam method firstOrCreate ke database

## Data User

ID	Username	ID Level Pengguna	
19	manager33	manager Tiga Tiga	2

<input type="checkbox"/>	 Ubah	 Salin	 Hapus	19	2	manager33	manager Tiga Tiga	\$2y\$12\$.6BBSUXN7qMgvJwMPs7lb4O.88PfGvLIY1.VM2GUvz/...	2025-03-08 03:48:18	2025-03-08 03:48:18
--------------------------	--	---	---	----	---	-----------	-------------------	--	---------------------	---------------------

## Praktikum 2.5

1.

```
namespace App\Http\Controllers;

use App\Models\UserModel;
use Illuminate\Support\Facades\Hash;
use Illuminate\Http\Request;

class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::create([
            'username' => 'manager55',
            'nama' => 'Manager55',
            'password' => Hash::make('12345'),
            'level_id' => 2,
        ]);

        $user->username = 'manager 56';

        $user->isDirty(); // true
        $user->isDirty('username'); // true
        $user->isDirty('nama'); // false
        $user->isDirty(['nama', 'username']); // true

        $user->isClean(); // false
        $user->isClean('username'); // false
        $user->isClean('nama'); // true
        $user->isClean(['nama', 'username']); // true

        $user->save();

        $user->isDirty(); // false
        $user->isClean(); // true
        dd($user->isDirty());
    }
}
```

2. Akan terjadi error karena sudah ada username dengan nama “manager55” di dalam database

<input type="checkbox"/>	 Ubah	 Salin	 Hapus	22	2	manager 56	Manager55	\$2y\$12\$4EYmJtEQWllqp/wK/1pO.wAbINRklw3LjcTY0/4P...	2025-03-08 05:15:39	2025-03-08 05:15:39
<input type="checkbox"/>	 Ubah	 Salin	 Hapus	23	2	manager55	Manager55	\$2y\$12\$rlBFf2Lfx4f4SRv9MzEmea.ZAx9powNfRkkk.EUu6A...	2025-03-08 05:15:40	2025-03-08 05:15:40

3.

```
class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::create([
            'username' => 'manager11',
            'nama' => 'Manager11',
            'password' => Hash::make('12345'),
            'level_id' => 2,
        ]);

        $user->username = 'manager12';

        $user->save();

        $user->wasChanged(); // true
        $user->wasChanged('username'); // true
        $user->wasChanged(['username', 'level_id']); // true
        $user->wasChanged('nama'); // false
        dd($user->wasChanged(['nama', 'username'])); // true
    }
}
```

4. Akan menampilkan nilai true dan data “manager11” akan ditambah di dalam database

```
true // app\Http\Controllers\UserController.php:29
```

<input type="checkbox"/>	 Ubah	 Salin	 Hapus	25	2	manager12	Manager11	\$2y\$12\$xFo7PREKNhz7q9kFdotTRYm3Dlx1BFzDpnqpEbRpX...	2025-03-08 05:25:36	2025-03-08 05:25:36
--------------------------	--	---	---	----	---	-----------	-----------	--	---------------------	---------------------

## Praktikum 2.6

1.

```
<!DOCTYPE html>
<html>
  <head>
    <title>Data User</title>
  </head>
  <body>
    <h1>Data User</h1>
    <a href="/user/tambah">+ Tambah User</a>
    <table border="1" cellpadding="2" cellspacing="0">
      <tr>
        <td>ID</td>
        <td>Username</td>
        <td>ID Level Pengguna</td>
        <td>Aksi</td>
      </tr>
      @foreach ($data as $d)
        <tr>
          <td>{{ $d->user_id }}</td>
          <td>{{ $d->username }}</td>
          <td>{{ $d->nama }}</td>
          <td>{{ $d->level_id }}</td>
          <td><a href="/user/ubah/{{ $d->user_id }}"></a> | <a href="/user/hapus/{{ $d->user_id }}">Hapus</a></td>
        </tr>
      @endforeach
    </table>
  </body>
</html>
```

2.

```
<?php

namespace App\Http\Controllers;

use App\Models\UserModel;
use Illuminate\Support\Facades\Hash;
use Illuminate\Http\Request;

class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::all();
        return view('user', ['data' => $user]);
    }
}
```

3. Akan menampilkan table semua data user

### Data User

[+ Tambah User](#)

ID	Username	ID Level Pengguna	Aksi	
1	admin	Administrator	1	<a href="#">Hapus</a>
2	manager	Manager	2	<a href="#">Hapus</a>
3	staff	Staff/Kasir	3	<a href="#">Hapus</a>
6	customer-1	Pelanggan Pertama	3	<a href="#">Hapus</a>
16	manager_dua	Manager 2	2	<a href="#">Hapus</a>
18	manager22	manager dua dua	2	<a href="#">Hapus</a>
19	manager33	manager Tiga Tiga	2	<a href="#">Hapus</a>
22	manager 56	Manager55	2	<a href="#">Hapus</a>
23	manager55	Manager55	2	<a href="#">Hapus</a>
25	manager12	Manager11	2	<a href="#">Hapus</a>
26	manager11	Manager11	2	<a href="#">Hapus</a>

4.

```
<!DOCTYPE html>
<body>
    <h1>Form Tambah Data User</h1>
    <form method="post" action="/user/tambah_simpan">

        {{ csrf_field() }}

        <label>Username</label>
        <input type="text" name="username" placeholder="Masukan Username">
        <br>
        <label>Nama</label>
        <input type="text" name="nama" placeholder="Masukan Nama">
        <br>
        <label>Password</label>
        <input type="password" name="password" placeholder="Masukan password">
        <br>
        <label>Level ID</label>
        <input type="number" name="level_id" placeholder="Masukan ID Level">
        <br><br>
        <input type="submit" class="btn btn-success" value="Simpan">

    </form>
</body>
```

5.

```
<?php

use Illuminate\Support\Facades\Route;
use App\Http\Controllers\LevelController;
use App\Http\Controllers\KategoriController;
use App\Http\Controllers\UserController;

/*
|-----
| Web Routes
|-----
|
| Here is where you can register web routes for your application.
| routes are loaded by the RouteServiceProvider and all of them
| be assigned to the "web" middleware group. Make something great
|
*/

Route::get('/', function () {
    return view('welcome');
});

Route::get('/level/', [LevelController::class, 'index']);
Route::get('/kategori', [KategoriController::class, 'index']);
Route::get('/user', [UserController::class, 'index']);
Route::get('/user/tambah', [UserController::class, 'tambah']);
```

6.

```
class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::all();
        return view('user', ['data' => $user]);
    }

    public function tambah()
    {
        return view('user_tambah');
    }
}
```

7. Akan menampilkan form tambah data user yang bisa diisi

## Form Tambah Data User

Username

Nama

Password

Level ID

8.

```
Route::get('/level/', [LevelController::class, 'index']);
Route::get('/kategori', [KategoriController::class, 'index']);
Route::get('/user', [UserController::class, 'index']);
Route::get('/user/tambah', [UserController::class, 'tambah']);
Route::post('/user/tambah_simpan', [UserController::class, 'tambah_simpan']);
```

9.

```
public function tambah_simpan(Request $request)
{
    UserModel::created([
        'username' => $request->username,
        'nama' => $request->nama,
        'password' => Hash::make('$request->password'),
        'level_id' => $request->level_id
    ]);

    return redirect('/user');
}
```

10. Setelah mengisi form dan menekan tombol simpan akan Kembali ke halaman /user

## Form Tambah Data User

Username

Nama

Password

Level ID

11.

```
<!DOCTYPE html>
<body>
  <h1>Form Ubah Data User</h1>
  <a href="/user">Kembali</a>
  <br><br>

  <form method="post" action="/user/ubah_simpan/{{ $data->user_id }}">
    {{ csrf_field() }}
    {{ method_field('PUT') }}

    <label>Username</label>
    <input type="text" name="username" placeholder="Masukan Username" value="{{ $data->username }}">
    <br>
    <label>Nama</label>
    <input type="text" name="nama" placeholder="Masukan Nama" value="{{ $data->username }}">
    <br>
    <label>Password</label>
    <input type="password" name="password" placeholder="Masukan password" value="{{ $data->password }}">
    <br>
    <label>Level ID</label>
    <input type="number" name="level_id" placeholder="Masukan ID Level" value="{{ $data->level_id }}">
    <br><br>
    <input type="submit" class="btn btn-success" value="Ubah">
  </form>
</body>
```

12.

```
Route::get('/user/tambah', [UserController::class, 'tambah']);
Route::post('/user/tambah_simpan', [UserController::class, 'tambah_simpan']);
Route::get('/user/ubah/{id}', [UserController::class, 'ubah']);
```

13.

```
public function ubah($id)
{
    $user = UserModel::find($id);
    return view('user_ubah', ['data' => $user]);
}
```

14. Akan menampilkan halaman form ubah data user. Setelah klik ubah akan membawa ke halaman ubah\_simpan

## Form Ubah Data User

[Kembali](#)

Username   
Nama   
Password

## Praktikum 2.7

1.

```
<?php

namespace App\Models;

use Illuminate\Database\Eloquent\Factories\HasFactory;
use Illuminate\Database\Eloquent\Model;
use Illuminate\Database\Eloquent\Relations\BelongsTo;

class UserModel extends Model
{
    use HasFactory;

    protected $table = 'm_user'; //menedefinisikan nama tabel yang digunakan
    protected $primaryKey = 'user_id'; //menedefinisikan primary key dari ta

    protected $fillable = ['level_id', 'username', 'nama', 'password'];

    public function level() : BelongsTo
    {
        return $this->belongsTo(LevelModel::class, 'level_id', 'level_id');
    }
}
```

2.

```
<?php

namespace App\Http\Controllers;

use App\Models\UserModel;
use Illuminate\Support\Facades\Hash;
use Illuminate\Http\Request;

class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::with('level')->get();
        dd($user);
    }
}
```

3. Akan menampilkan jumlah array

```
Illuminate\Database\Eloquent\Collection {#319 ▼ // app\Http\Controllers\UserController.php:14
  #items: array:9 [▶]
  #escapeWhenCastingToString: false
}
```

4.

```
class UserController extends Controller
{
    public function index()
    {
        $user = UserModel::with('level')->get();
        return view('user', ['data' => $user]);
    }
}
```

5.

```
<!DOCTYPE html>
<html>
<head>
  <title>Data User</title>
</head>
<body>
  <h1>Data User</h1>
  <a href="/user/tambah">+ Tambah User</a>
  <table border="1" cellpadding="2" cellspacing="0">
    <tr>
      <td>ID</td>
      <td>Username</td>
      <td>ID Level Pengguna</td>
      <td>Kode Level</td>
      <td>Nama Level</td>
      <td>Aksi</td>
    </tr>
    @foreach ($data as $d)
      <tr>
        <td>{{ $d->user_id }}</td>
        <td>{{ $d->username }}</td>
        <td>{{ $d->nama }}</td>
        <td>{{ $d->level_id }}</td>
        <td>{{ $d->level->level_kode }}</td>
        <td>{{ $d->level->level_nama }}</td>
        <td><a href="/user/ubah/{{ $d->user_id }}"></a> | <a href="/user/hapus/{{ $d->user_id }}">Hapus</a></td>
      </tr>
    @endforeach
  </table>
</body>
</html>
```

6. Akan menambahkan 2 kolom baru yaitu kolom kode level dan kolom nama level

## Data User

[+ Tambah User](#)

ID	Username	ID Level Pengguna	Kode Level	Nama Level	Aksi	
1	admin2	admin	1	ADM	Administrator	<a href="#">Hapus</a>
2	manager	Manager	2	MNG	Manager	<a href="#">Hapus</a>
